Bachelor of Humanities 210 ECTS

Community Educator, Adventure and Outdoor Education

Adventure and Outdoor Education

(Community Educator, Bachelor of Humanities, 210 ECTS)

The community educator studies train specialists in adventure and outdoor education.

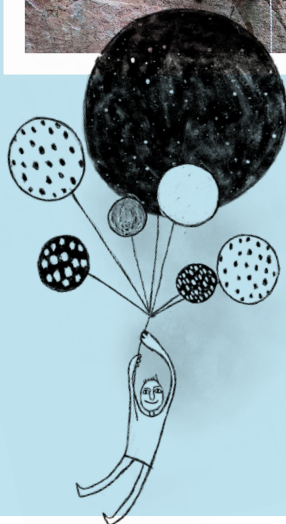

Adventure and outdoor education is based on experiential and activity-based learning methodology and aims at supporting the growth, development, well-being and agency of individuals, groups and communities.

As the basis of the studies is a multidisciplinary theoretical framework, which is put into practice in versatile authentic learning environments, such as lakes, the sea, forests, and in the fells and wilderness of Lapland.

During the studies, students learn to plan and carry out safe adventure educational processes for different target groups and to evaluate and develop adventure educational activities.

After graduation, students have multiple employment opportunities within the different sectors of national and international working environments. Community educators with adventure educational orientation can be employed e.g. in the field of youth work, NGO work, education and training, well-being services, or nature- and adventure-based entrepreneurship.

Depending on the students' own interests and specialization, they may choose to work as instructors or guides in e.g. kayaking, trekking, rock climbing and skiing.
